Suggestions for 2019-nCoV Airway Management

- 1. Wear PPE for airway management according to your institute guide
- 2. Early, elective intubation, avoid late, emergent intubation
- 3. Preoxygenation in BUHE position at least 5 mins
 - NRM 15 lpm + NC 15 lpm or if pt is cooperative or has shunt consider
 - BVM with PEEP 10 cmH₂O + HEPA filter + NC 15 lpm with spontaneous breathing
- 4. Avoid any positive ventilation (Bagging, BIPAP, CPAP, HFNC) during intubation
- 5. Consider glycopyrrolate 0.2-0.4 mg iv or atropine 0.6 mg iv to dry secretion
- 6. Full dose RSI, consider: Rocuronium 1.5 mg/kg iv then Ketamine 1.5 mg/kg iv

Sistema per ridurre rischio contaminazione impianto aspirazione

Demo with bacteria filter (Not HEPA)
